

## Lab 08042017

Create a notes taking app that allows you to save a **Title**, **Date**, and **Notes Text**.

To save a date property, add a **Date Attribute** in Core Data. For the current date and time, you can use `Date()`:

Implement **Delete** that deletes the row from Core Data and the screen. Use  
`context.delete(...)`  
`context.save()`

## Notes

**Lovely teaching day***2017-08-03 17:37:13 +0000*

Great students, fun times

**in the sun***-03 17:50:54 +0000*

topped at the park to play with the dogs  
oon. I found out I was missing my book so I  
k home to get it. On the way back, I ran  
v friends I hadn't seen in a very very long

**Learning how to program***2017-08-03 17:56:15 +0000*

I had a much easier time grasping the concepts that  
were being taught in class today. Not only was the  
teach helpful, we also had awesome Mentor  
Assistants.
